UI / UX • COLLEGE ASSIGNMENT

UI and UX

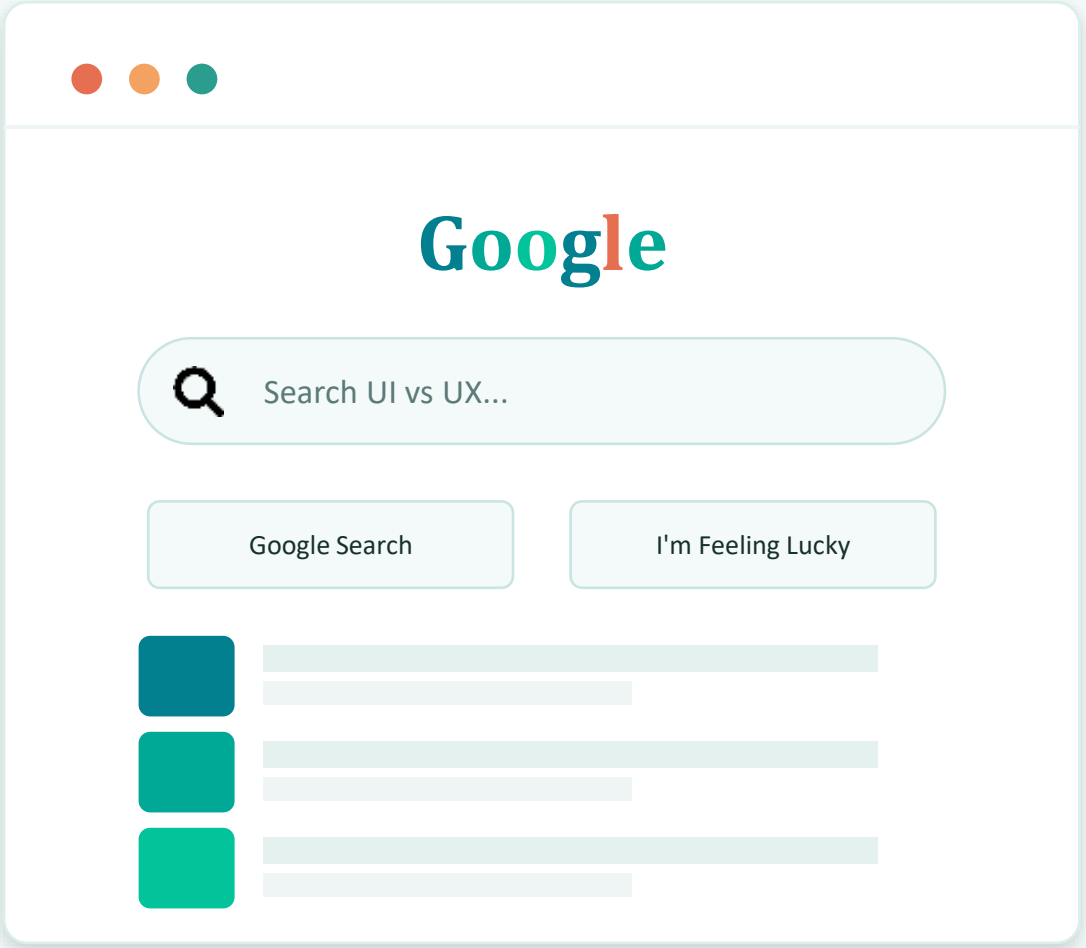

Understanding Their Roles and Differences

Student Name	Madhesh R
Register Number	___tu626320211025_____
Department / Class	___bsc cs aiml_____
Subject	UI / UX

What is UI?

User Interface

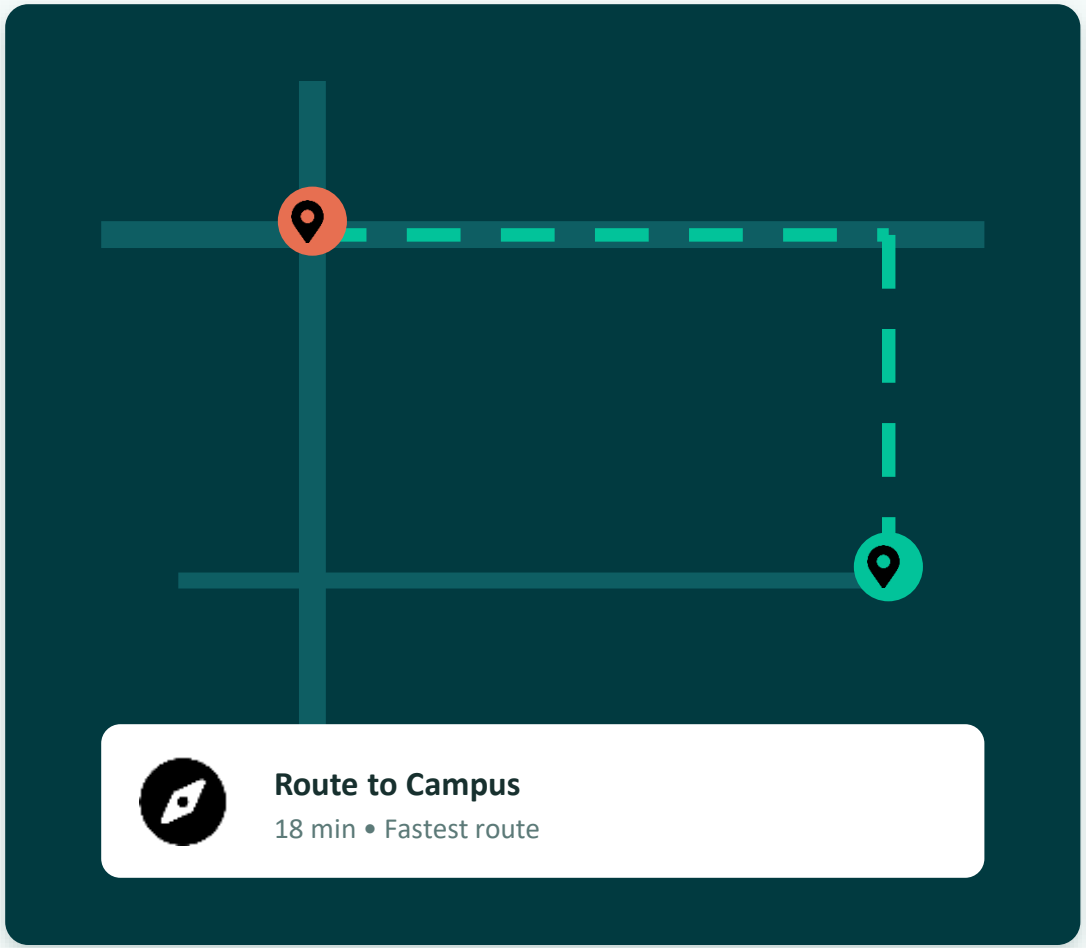

- UI is the visual and interactive part of an application or website.
- It includes buttons, icons, menus, colors, fonts and images.
- UI focuses on how a digital product looks and interacts.

REAL-LIFE EXAMPLE

Google Search

The clean search box, simple buttons and minimal layout make Google's UI instantly familiar and easy for anyone to use.

What is UX?

User Experience

- UX is the overall experience a user has while using a product.
- It focuses on ease of use, navigation, efficiency and satisfaction.
- Good UX helps users complete tasks easily.

REAL-LIFE EXAMPLE

Google Maps

Search, directions, route planning and live navigation work together so users reach their destination smoothly — that is good UX.

UI vs UX: 5 Differences

Two different but connected sides of great product design

UI — User Interface	UX — User Experience
Focuses on appearance	Focuses on overall experience
Deals with visual elements	Deals with usability
Includes colors, buttons and icons	Includes navigation and user flow
Makes a product attractive	Makes a product easy to use
Asks “How does it look?”	Asks “How does it work and feel?”

Five Popular Applications

Every one of these apps blends strong UI with thoughtful UX

WhatsApp

YouTube

Google Maps

Spotify

Amazon

Each of these applications uses both UI and UX together — attractive visuals (UI) combined with a smooth, easy-to-use experience (UX) — to keep millions of users engaged every day.

UI Elements in the 5 Applications

Three visible interface elements that define each app's look

Application	3 UI Elements
 **WhatsApp**	Chat bubbles • Icons • Navigation bar
 **YouTube**	Thumbnails • Buttons • Navigation bar
 **Google Maps**	Map • Location icon • Buttons
 **Spotify**	Album artwork • Play button • Navigation bar
 **Amazon**	Product images • Search bar • Buttons

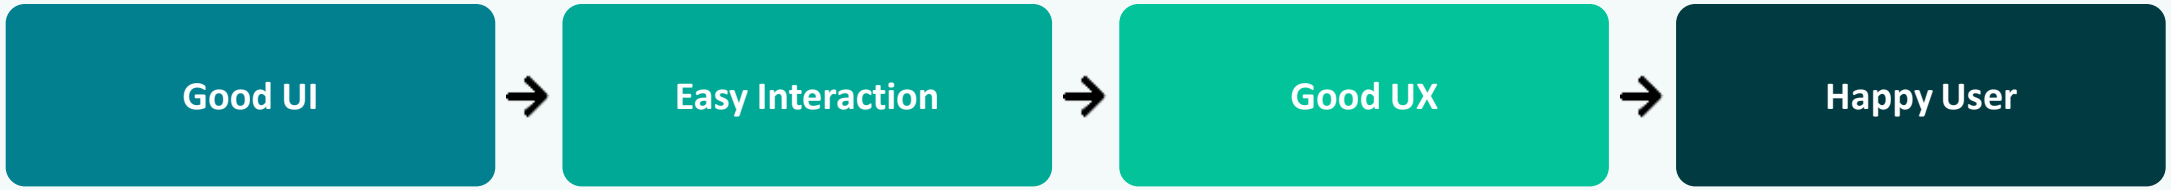

UX Features in the 5 Applications

Three experience qualities that make each app easy and enjoyable to use

Application	3 UX Features
WhatsApp	Easy messaging • Media sharing • Simple navigation
YouTube	Search • Recommendations • Continuous playback
Google Maps	Route planning • Live navigation • Traffic info
Spotify	Personalized playlists • Music discovery • Smooth playback
Amazon	Easy search • Filters • Simple ordering

How UI and UX Work Together

They are different, but one leads naturally into the other

Example: A Food Delivery Application

UI

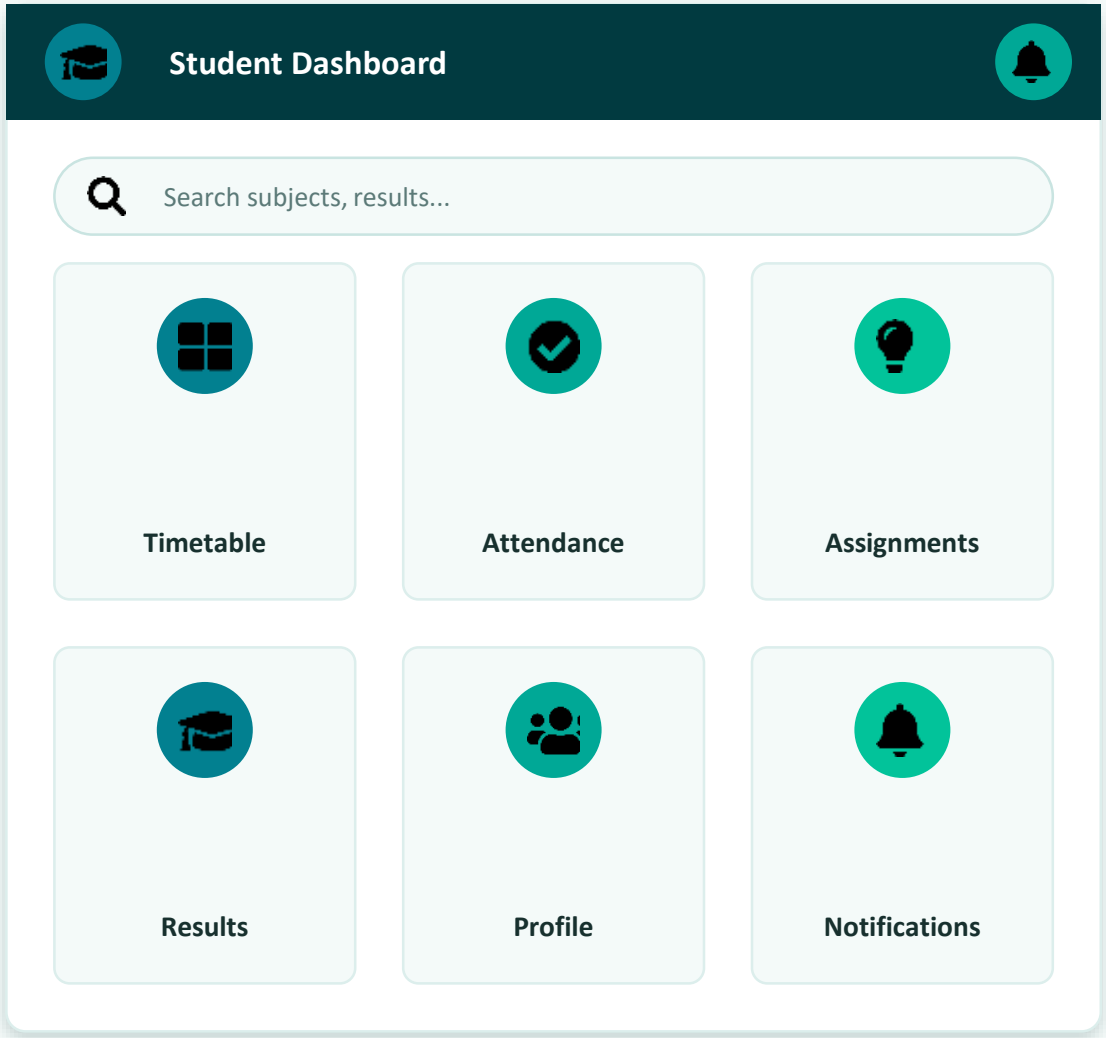

- Food images displayed attractively
- Clear, tappable buttons
- Attractive overall layout

UX

- Simple, quick ordering process
- Clear order tracking
- Smooth checkout and delivery

Designing a College Student Portal

Applying UI and UX thinking to a real academic product

UI Elements

Dashboard, Navigation menu, Student profile, Timetable, Attendance, Assignments, Results, Notifications, Search bar, Buttons and icons

Keeping UX Simple

- Simple navigation
- Clear labels
- Important info on the dashboard
- Mobile-friendly design
- Clear error messages

Suggestions & Conclusion

3 Suggestions to Improve Student Experience

1

Personalized Dashboard

Show timetable, attendance, assignments and exams all in one place.

2

Smart Notifications

Notify students about deadlines, exams and announcements on time.

3

Quick Access

Provide shortcuts to results, attendance, assignments and study materials.

Conclusion

- UI focuses on appearance and interaction.
- UX focuses on usability and overall experience.
- UI and UX work together to create better digital products.

Thank You
